

AVENTICS Series CCI Compact cylinders (ISO 21287)

The AVENTICS Series CCI (ISO 21287) cylinders stand for innovative, compact construction and an easy to clean design. The Series CCI (ISO 21287) is ideal for long strokes and increased requirements for optimized cycle times and moving masses. The sensors can be installed quickly and easily on all sides and over the entire cylinder lengths.

Technical data

Industry	Industrial
Standards	ISO 21287
Piston Ø	63 mm
Stroke	15 mm
Ports	G 1/8
Functional principle	Single-acting, extended without pressure
Cushioning	Elastic cushioning
Magnetic piston	Piston with magnet
Environmental requirements	Industry standard
Piston rod thread - type	Internal thread
Piston rod thread	M10
Piston rod	single
Scraper	Standard Industry Scraper
Pressure for determining piston forces	6,3 bar
Retracting piston force	1964 N
Extracting piston force	82 N
Min. ambient temperature	-20 °C
Max. ambient temperature	80 °C
Min. working pressure	2 bar

Max. working pressure	10 bar
Impact energy	0.75 J
Weight 0 mm stroke	0.703 kg
Weight +10 mm stroke	0.087 kg
Stroke max.	25 mm
Medium	Compressed air
Min. medium temperature	-20 °C
Max. medium temperature	80 °C
Max. particle size	50 µm
Min. oil content of compressed air	0 mg/m ³
Max. oil content of compressed air	5 mg/m ³

Material

Piston rod	Stainless Steel
Scraper material	Polyurethane
Seal material	Polyurethane
Material, front cover	Aluminum
Cylinder tube	Aluminum
End cover	Aluminum
Part No.	R422001518

Technical information

With cylinders with a piston rod extension, dimensions "WH" and "ZB" are increased by the value of the piston rod extension.

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

The oil content of compressed air must remain constant during the life cycle.

Use only the approved oils from AVENTICS. Further information can be found in the "Technical information" document (available in <https://www.emerson.com/en-us/support>).

Maximum admissible lateral force dynamic

F_{dyn} = dynamic lateral force

X = distance between force application point and cylinder cover

S = stroke

Maximum admissible lateral force dynamic

F_{dyn} = dynamic lateral force

X = distance between force application point and cylinder cover

S = stroke

Maximum admissible lateral force static

F_{stat} = static lateral force
 X = distance between force application point and cylinder cover

Maximum admissible lateral force static

F_{stat} = static lateral force
 X = distance between force application point and cylinder cover
 S = stroke

Extracting piston force

F = spring return force, s = return stroke

Overview drawing

NOTE: This overview drawing is only for orientation to indicate where the various accessory parts can be fastened to the cylinder. The illustration has been simplified for this purpose. It is thus not possible to derive the dimensions from this overview.
